

South Dakota's Child Care Crisis: A Crime Prevention Tragedy

A research brief by

FIGHT CRIME: INVEST IN KIDS

This brief is based on a report of an expert panel convened by **FIGHT CRIME: INVEST IN KIDS**, an anti-crime group of 1,000 police chiefs, sheriffs, prosecutors, victims of violence, and youth violence experts. The authors are: Harvard pediatrician **T. Berry Brazelton**; Yale child development expert **Edward Zigler**; University of Pennsylvania criminologist **Lawrence Sherman**; former police chiefs **William Bratton** of New York and **Jerry Sanders** of San Diego, and **FIGHT CRIME: INVEST IN KIDS**' president **Sanford Newman** and research director **William Christeson**. **The full report and references for this brief are available at www.fightcrime.org.**

Quality Child Care Cuts Crime

Child care is a reality today for an estimated 13 million American children under age six. Over 71% of South Dakota mothers of children under age six are in the labor force. Despite some recent misleading headlines, the good news is that quality care can cut crime and violence.

- New research reported in JAMA tracked for 15 years over 900 children who had been enrolled in government-funded Child-Parent Centers while 3- and 4-year olds. Compared to the children in the program, similar children left out of the program had 70% more violent arrests in their teens.
- An earlier 22-year study of the High/Scope Perry Preschool program showed that leaving at-risk children out of this program multiplied

Children Not in the Child-Parent Centers Had 70% More Violent Arrests by Age 18

Compared to the three- and four-year-olds enrolled in this quality child care program, those left out were 70% more likely to have a violent arrest by age 18.

High/Scope Perry Preschool Reduces Future Crime

At-risk 3 & 4 year olds randomly excluded from this preschool program were five times more likely to become chronic offenders (over 4 arrests) by age 27.

Chronic Lawbreakers at Age 27

by five times the risk that they would become chronic lawbreakers as adults.

- Large national studies show that at-risk kids who attended quality child care programs had no more behavior problems at age eight than children of college-educated moms. But those at-risk kids who received poor quality care had significantly more problem behaviors.

Short-term data from an NICHD study suggests kids who spent little time in child care scored lower than others on school readiness but were also unusually non-aggressive in kindergarten (though this may only reflect shyness in unfamiliar settings). For many working parents, however, the question is only whether the child care they can afford will be good or poor care. What remains clear from this study and others showing long-term effects is that quality child care for poor children reduces later disruptiveness, crime, and violence.

Continued on the other side

Parents Need Help Paying for Quality Child Care

In 1998, average tuition at a public university in South Dakota was \$3,038. In urban areas tuition for a 4-year old in a child care center averaged \$4,243 a year. Younger children cost even more, so care for two children can exceed \$9,000—just below what a full-time, minimum wage earner makes in a year. Many parents can't pay this any more than they could pay private school tuition if public schools were eliminated.

In addition, low child care center teacher wages in South Dakota, averaging only \$14,480, too often result in high staff turnover, inadequately-trained staff, and low quality care.

Governments are Dropping the Ball

Head Start, the principal federal child development program for children in poverty, is so under-funded that it could serve only 53% of eligible 4-year olds in South Dakota in 1999 and (along with Early Head Start) only 35% of the eligible children aged 0 to 5.

The Child Care and Development Block Grant, to help low-income parents pay for child care, could serve only 8% of eligible South Dakota children in 1999.

Educational Child Care Saves Money

Even after accounting for inflation, the public saved over \$700 for every \$100 invested in a preschool and home visitation program.

For every \$100 Invested

Over \$700 was saved

High/Scope Perry Preschool Program

Some state initiatives, like Kentucky's Family Resource Centers and Georgia's universal pre-kindergarten programs are making major contributions. But South Dakota remains far from meeting the needs of low- and moderate-income working families for quality child care.

Investments that Save Money

The High/Scope Perry Preschool program cut crime, welfare and other costs so much that it saved \$700 for every \$100 invested. The Child-Parent Center study showed similar savings. Failing to invest in quality child care now squanders billions, much of which could otherwise be used for Social Security, tax cuts, or anything else in the years ahead.

Law Enforcement is United

George Mason University professors Scott Keeter and Stephen Mastrofski recently surveyed police chiefs. Nine out of ten chiefs said America could greatly reduce crime by expanding educational child care programs and after-school programs, and agreed that we'll pay more later if we don't invest now. Our 1,000 members are determined to put dangerous criminals behind bars. But we also want to save money and lives by preventing crime. It's time to invest in what works.

Police Chiefs Say Child Care Will Reduce Crime, Save Money

9 out of 10 agreed: "If America does not make greater investments in after-school and educational child care programs to help children and youth now, we will pay far more later in crime, welfare, and other costs."

- NICHD data:
Media coverage of the NICHD data was based on press releases, a press briefing, and a symposium presentation at a meeting of the Society for Research in Child Development, Thursday, April 19, 2001. No paper has yet been presented on these specific findings and members of the research team have challenged some of the findings as widely reported in the press, such as the implication that children who are in child care longer had above normal levels of problem behaviors or aggression compared to other children their age tested using the same behavior instrument. Unfortunately, the press also largely ignored other findings presented at the same time showing that children who had access to good quality child care centers did better on school readiness tests in kindergarten and got along better with their peers compared to those children who attended poor quality child care centers.

- Child care teacher wages:
Bureau of Labor Statistics: <http://stats.bls.gov/oes/1999/oesrcrst.htm> [note: in some states, local surveys have been conducted and reported, but they should be similar to this national database of state-specific data].
- The Head Start and Early Head Start estimates:
These estimates are based on 2000 figures from the Head Start Bureau of HHS for children served by state and age, compared to 1999 projected census data on children in poverty, with some additional calculations to derive age specific poverty rates, to adjust for those who attend Head Start but who are not in poverty and to remove from the formula those in HS who are 5 years old. Though we feel this is a solid approach, we did not feel the accuracy warranted presenting exact percentages, so we presented the results as 'about X in 10' or similar language. Also, in some states local surveys or calculations have been conducted and reported. Even so, we decided to use our standard approach, but we attempted to ensure that those locally reported results were not greatly different from these estimates.
